● CV Value of Concentric Butterfly Valves

Definition of a Kv Value

The value Kv is the flow rate of pure water at 15°C passing through the valve when the disc is fully opened and the differential pressure between the two ends of the valve is 100 kPa.

Definition of a Cv Value

The value Cv is the flow rate of pure water at 60°F passing through the valve when the disc is fully opened and the differential pressure between the two ends of the valve is 1 PSI.

Sizes in	Flow in USGPM @ 1 PSI @ Various Disc Angle

● **Silent Check Valve Engineering Data**

FIGURE 13

- Notes:**
1. Pressure drop curves are based on water flow.
 2. Valve cracking pressure is equal to or less than 0.5 psid.
 3. Valve cracking pressure increases to between 0.75 and 1.25 psid when installed vertically with flow upwards.

Method of Calculating Flow

Liquid Flow

$$C_v = Q \sqrt{\frac{G}{\Delta P}} \quad Q = C_v \sqrt{\frac{\Delta P}{G}} \quad \Delta P = G \left(\frac{Q}{C_v} \right)^2$$

Gas Flow

$$C_v = \frac{Q}{963} \sqrt{\frac{GT}{\Delta P (P_1 + P_2)}} \quad Q = 963 C_v \sqrt{\frac{\Delta P (P_1 + P_2)}{GT}}$$

Saturated Vapour

$$C_v = \frac{W}{K} \sqrt{\frac{1}{\Delta P (P_1 + P_2)}} \quad W = C_v K \sqrt{\Delta P (P_1 + P_2)}$$

Superheated Vapour

$$C_v = \frac{W(1+0.0007T_{SH})}{K} \sqrt{\frac{1}{\Delta P (P_1 + P_2)}} \quad C_v = \frac{C_v K}{(1+0.0007T_{SH})} \sqrt{\Delta P (P_1 + P_2)}$$

Variables

- C_v = Valve Coefficient
- ΔP = (P₁ - P₂) Pressure Drop
- P₁ = Inlet Pressure (PSIA)
- P₂ = Outlet Pressure (PSIA)
- G = Specific Gravity
- Water = 1.0 at 60°F and 1 ATM
- Air = 1.0 at 60°F and 1 ATM

- Q = Flow
- Liquid = USGPM
- Gas = SCFH
- T = Absolute Temperature (°F + 460)
- T_{SH} = Superheat (°F)
- Total Temperature Minus Saturation Temperature
- W = lbs. Per Hour (LB/H)
- K = Constant For Vapours

● **ST & SM**

(See chart on page 9)

Body: Stainless steel single braided corrugated hose with SCH40 carbon steel male nipples welded at each end.

Sizes: From 1/2" to 2" (15mm to 50mm)

Lengths: From 10" to 14" (250mm to 350mm)
other lengths also available.

Braided Hose: Gives a high temperature leak proof, with appropriate fittings attached you have a connector which allows temperature up to 850°F (457°C) and pressure up to 850 PSI (5860 KPa) at 70°F (21°C).

Temperature: As working temperature increases, the pressure ratings of corrugated hose decreases.

Allowable Motion: Flexible pump connectors will absorb vibration, release stress from mating equipment and allow the correction of some misalignment.

SERIES ST // Standard Male Threaded Connectors

(See chart on page 10)

Body: Stainless steel single braided corrugated hose with ASA #150 carbon steel plate flanges welded at each end.

Sizes: From 2" to 14" (50mm to 350mm)

Lengths: From 10" to 20" (250mm to 500 mm)
other lengths also available.

Braided Hose: Gives a high temperature leak proof, with appropriate fittings attached you have a connector which allows temperature up to 850°F (457°C) and pressure up to 850 PSI (5860 KPa) at 70°F (21°C).

Temperature: As working temperature increases, the pressure ratings at corrugated hose decreases.

Allowable Motion: Flexible pump connectors will absorb vibration, release stress from mating equipment and allow the correction of some misalignment.

Note: Install all pump connectors in a straight line without offset. Piping must be anchored or hung so that the weight of the piping does not rest on the pump connector.

SERIES SM // Standard Flanged Connectors

 Size: DN15~DN400

SERIES SMF // Threaded end double rubber connectors

Dimensions not to be used for construction unless prints certified by factory.
 Dimensions are subject to change without prior notice.

● DUT

Body: Spherical shape, stronger than the standard cylindrical shape. The spherical designed «long-arch» reduces turbulence and sediment build-up. #150 MI Union fittings at both ends.

Ratings: Up to 214 PSI (1475 kPa) and up to 240°F (115°C)

Sizes: From 1/2" to 2" (15mm to 50mm)

Allowable Motion: Spherical bellows can absorb many times the movements of standard products. Compression, extension, deflection and angular movements are easily handled. High pressure molding of EPDM results in lighter weight and thinner wall sections that requires less force to deflect than other products. Reducing and preventing stresses and strains on flanges or piping. Series DUT allows angular motion to 45° angle.

Corrosion Resistance: EPDM offers excellent chemical resistance. Under normal conditions, extensive service life can be expected from EPDM material.

Vibration, Noise & Shock: Reduces noise, sound losses energy travelling axially through the EPDM bellows. Reduces vibrations, insulates the equipment to allow free movement in its vibration mountings.

SERIES DUT // EPDM Union Arch Flexibles Series

● **SSP & DSP**

(See chart on page 13)

Body: Spherical shape, stronger than the standard cylindrical shape. The spherical designed «long-arch» reduces turbulence and sediment build-up. ANSI #150 flanges at both ends.

Ratings: Up to 214 PSI [1475 kPa] and up to 240°F (115°C)

Sizes: From 1 1/2 to 20" (40mm to 500mm)

Allowable Motion: Spherical bellows can absorb many times the movements of standard products. Compression, extension, deflection and angular movements are easily handled. High pressure molding of EPDM results in lighter weight and thinner wall sections that requires less force to deflect than other products. Reducing and preventing stresses and strains on flanges or piping. Series SSP allows standard motion.

Corrosion Resistance: EPDM offers excellent chemical resistance. Under normal conditions, extensive service life can be expected from EPDM

Vibration, Noise & Shock: Reduces noise, sound loses energy travelling axially through the EPDM bellows. Reduces vibrations, insulates the equipment to allow free movement on its vibration mountings.

SERIES SSP // EPDM Single Arch Flexibles

(See chart on page 14)

Body: Spherical shape, stronger than the standard cylindrical shape. The spherical designed «long-arch» reduces turbulence and sediment build-up. ANSI #150 Flanges at both ends.

Ratings: Up to 214 PSI (1475 kPa) and up to 240°F 115°C

Sizes: From 1 1/2" to 14" (40mm to 350mm)

Allowable Motion: Spherical bellows can absorb many times the movements of standard products. Compression, extension, deflection and angular movements are easily handled. High pressure molding of EPDM results in lighter weight and thinner wall sections that requires less force to deflect than other products. Reducing and preventing stresses and strains on flanges or piping. Series DSP allows extra motion.

Corrosion Resistance: EPDM offers excellent chemical resistance. Under normal conditions, extensive service life can be expected from EPDM

Vibration, Noise & Shock: Reduces noise, sound loses energy travelling axially through the EPDM bellows. Reduces vibrations, insulates the equipment to allow free movement on its vibration mountings.

Dimensions not to be used for construction unless prints certified by factory.

Easy Installation: The floating, metallic flanges rotate readily on the bellow compensating for mating flange rotational misalignment. Extra retaining rings or gasket are not required. The rigid metallic flange prevent seepage-sweeping. All flanges are drilled to #150 ASA standard drilling pattern (other drilling patterns available on demand) See chart for Flange/bolting dimensions. All face to face dimensions are shown from gasket to gasket (the gasket is an integral part of the joint).

• Typical Specifications

Typical Specifications for Stainless Steel Flexibles

Supply and install shown on plans FLO FAB stainless steel braided metal flexible connectors. Pump connectors are made only in series 300 stainless steel with stainless corrugated inner tubing and an outer shield of stainless wire braid. Steel fixed flanges ASA #150 standard or SCH40 nipples are used as end fittings.

Maximum temperature is 850°F (457°C). Maximum working pressure ranges from 850 PSI (5850 kPa) at 1/2" (15 mm) to 150 PSI (1034 Kpa) at 14" (350 mm). Lengths vary from 10" (250 mm) to 20" (500 mm). Other than standard lengths are available.

Available Sizes:

Series ST flexible connectors (with F.N.P.T. connections): From 1/2" (15 mm) to 2" (50mm)
 Series SM flexible connectors with flanges: From 2" (50 mm) to 20" (500 mm)

Typical Specifications for EPDM Steel Flexibles

Supply and install as shown on plans FLO FAB EPDM flexible connectors. Each unit shall be molded on EPDM, the sphere combines the strength of the spherical shape, the flexibility of rubber and the durability of alignable steel flanges. It also offers maximum deflection, elongation and compression. The spherical designed «long-arch» reduces turbulence and noises. The floating flanges are standard #150 ASA drilled to mate. Each unit shall be capable of working pressures up to 214 PSI (1475 Kpa) and temperatures up to 240°F (115°C)

Available Sizes:

Series SSP-EPDM single flexible connectors with flanges: From 1 1/2" (40 mm) ID to 20" (500 mm) ID
 Series DSP-EPDM dual flexible connectors with flanges: From 1 1/2" (40 mm) ID to 14" (300 mm) ID
 Series DUT-EPDM union flexible connectors with F.N.P.T. end: From 1/2" (20 mm) ID to 2" (50 mm) ID

 Size Range: 1/4"
 Connections: SS2501: Threaded
 SS2511: Threaded Extended

Pressure and/or temperature ports

● **Air Vent Series AA**

Features

The FLO FAB Automatic Air Vent series AA is designed for continuous air venting in hot and chilled water systems. When used to protect coils, it is best located on the supply side of the coil to prevent air from entering the coil and requiring a service call to vent the air. The unit is best located where pipe velocities are reduced. An ideal location is directly in the body of a «Y» Strainer. The strainer screen breaks and collects bubbles which are vented by

Specifications

Float Material: Polypropylene

Cap Material: Nylon

Body Material: Brass

Notes

- 1) For continuous air venting, cap should remain open one full turn.
- 2) The «Y» Strainer should always be equipped with a blow-down valve.

Nominal Dimensions

MODELS	Diameter	A	B	C	D	E	Weight
AA0012	1/8" 3mm	2 15/16" 75mm	2 5/8" 67mm	1 5/8" 41mm	13/16" 21mm	5/16" 7.9mm	0.4 lbs 0.18 kg
AA0025	1/4" 8mm	3 1/8" 79mm	2 5/8" 67 mm			1/8" 3.1mm	0.43 lbs 0.20 kg

Dimensions not to be used for construction unless prints certified by factory.
Dimensions are subject to change without prior notice.

● Air Vent Series AA

Figure 1 Shows the installation of the AA for the venting of air while the fluid is circulating in the system. The Figure shows the required increase in pipe size in order to obtain proper separation of air from water. FLO FAB's series AS Air Scoop which is designed for efficient separation of air from water in hydronic heating systems can also be installed.

When the AA is installed as shown in **Figure 2**, the air will not be vented while the Fluid is circulating in the system, but it can vent when the system is shut off.

The AA should be mounted vertically as its operation is based on the vertical movement of the float. See **Figure 3**

Note: In order to get best results in venting air from risers, use connecting pipes of at least 1/2" diameter between the float vent valves and the installation.

MAINTENANCE

No maintenance is normally required. However, if the AA is disassembled for inspection or cleaning, it is important that when re-assembling to ensure that the spring loaded lever properly engages under the float collar.

OPERATION

After installing the AA, back off the small vent cap two turns, as shown on **Figure 4**. This is the proper operating setting which allow air to be vented from the system. It is advisable not to take off the cap to prevent impurities from entering the valve.

● Air Vent Series MV

Features

The FLO FAB Automatic Air Vent series MV features a stainless steel spherical float design. The air in the piping system is vented through the discharge valve which is normally open. The rising water activates the float to close the valve. The valve outlet is tapped to be hooked to the safety drain line.

The simplicity of design of the FLO FAB Series MV assures long-lasting efficiency. The stainless steel float and valve mechanism involve no wearing parts, no intricate function. The precision custom fit cast iron body, float and valve, protectively houses their operation under the most rugged conditions.

- 1) Rugged cast iron body and cover
- 2) Stainless steel float and trim
- 3) Spherical float for strenght
- 4) Special design eliminates blow-by
- 5) Tapped to take safety drain line
- 6) Two sizes suit all riser systems
